

Captiva 7.7 Upgrade

Utilize new features, technology, and power in your capture workflow

Building on the technology and success of the Captiva product line, Captiva 7.7 has been released along with several new features, improved user experiences, and efficiency.

Highlights of this release include a transition to a browser-based capture application and Real-Time Services (REST), which quickly and easily processes data, extracts, handles images, OCR data, and barcodes. A fully-featured interface enhances usability and your scanning, indexing, and validation workflows benefit from the fastest and most reliable Captiva release. And, Captiva 7.7 remains as adaptable and scalable as ever.

PaperFree has years of experience with Captiva integration projects and has the expertise and tools necessary to help your enterprise take full advantage of the newest Captiva offering.

Features | Benefits

- **Web-based capture without the need for a plugin**
- **New user interface**
- **New file ingestion features**
- **Improved Captiva Designer features**
- **Faster and more reliable**
- **Real-Time Services (REST) provide a variety of classification and extraction features**

How can PaperFree help you upgrade to Captiva 7.7?

- PaperFree will conduct a complete system health check and system configuration review to evaluate your current hardware and will make recommendations for any necessary upgrades.
- PaperFree will conduct a complete review of all capture processes in use and share best practices learned from hundreds of successful capture implementations
- PaperFree will review and recommend best practices for lookups, validations, and business rules, as well as recommend advanced features.
- PaperFree can provide customized training and knowledge transfer for internal staff and administrators

Captiva 7.7 Features

Captiva Web Client

Captiva 7.7 includes the new Captiva Web Client - a new front-end interface that scans, indexes, and validates documents without the need for additional browser plugins, such as Active-X or Java. It supports the following:

- Scan-time automated document classification and data extraction performed in the background with Captiva Real-Time Capture services to reduce errors and increase knowledge worker productivity.
- Customizable form location and layout with dual monitor support.
- Simplified configuration with Captiva standard Document Types and Profiles.

Captiva Advanced Recognition Enhancements

Captiva 7.7 Advanced Recognition enhancements include:

- “Fuzzy” match capabilities for free-form recognition of semi-structured, unstructured, and mobile-captured documents. Fuzzy matching reduces regular expressions by 75%.
- OCR engine decoupled from main extraction logic - easily add alternate recognition engines.

Captiva Identification Module

Captiva Identification Module is a new utility that performs document assembly, assigns recognition templates, and identifies document types for enhanced routing processes. It also features a flexible UI that improves operator efficiency for high-speed operator-assisted classification.

Performance and Other Features

Other features of Captiva 7.7 include:

- Standard Import replaces the Multi-Directory Watch (MDW) and Email Import modules. It imports image files from directories, email, attachments from an email server, and files and batch node value with the Captiva Web Client as batches.
- 64-bit Captiva server for faster processing
- Reduced Production Auto-Learning (PAL) learning cycle times to improve performance in high volume environments.
- Textual classification no longer requires PAL to classify documents via machine-learned keywords and relationships
